

WiQo Nourishing and Moisturizing Face Cream for Dry Skin provides dry skin with the nourishing principles and protective substances it lacks, leaving it nourished and hydrated. This product is indicated for its protective action on the superficial layers of the skin and on skins altered by chemical peelings or other aesthetic medicine treatments. It is well tolerated even by highly reactive skins.

DIRECTIONS FOR USE

Suitable for use on face, neck and cleavage. Apply mornings and evenings, and whenever necessary. We recommend the use of WiQo Nourishing and Moisturizing Face Cream for Dry Skin in conjunction with WiQo Smoothing Face Fluid . The combined action of these two products helps keep skin constantly active and stimulated. Due to its protective action on the upper layers of the skin, it is recommended for use on skin that has undergone a chemical peel or other cosmetic medicine treatment. It is well tolerated by even the most sensitive of skins. The plant extracts in the WiQo Nourishing and Mosturizing Face Cream for Dry Skin can cause variations in colour and consistency, without affecting the products' quality or properties.
